

Shared Events - DriverStars

 mobileapp-help.netradyne.com/hc/en-us/articles/32581980099481-Shared-Events-DriverStars

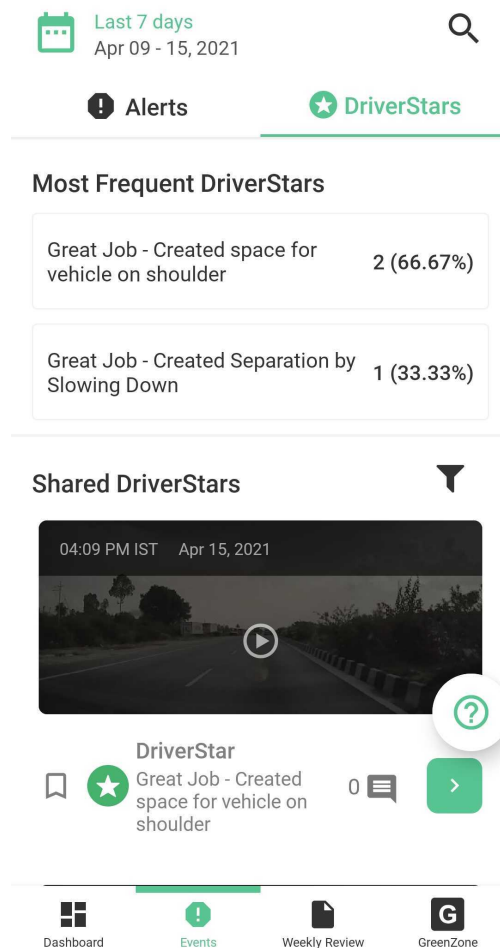

When you drive the vehicle, the Driver•i device captures a video of the events that take place while driving to create Alerts, as needed. The Alerts can help you understand your driving behavior and improve the same.

The events also provide your manager information about your driving behavior. The manager can schedule a coaching session to discuss any issue that needs to be addressed. Your driving behavior is categorized into Neutral Events, Alerts, and DriverStars. Neutral Events are expected safe driving events that follow the required fleet thresholds and traffic regulations. These indicate the driving events where you have performed as expected. For example, stopping at a red light is a neutral event because you are expected to stop. Neutral Events are used to determine the level of compliance.

The Shared Events screen provides complete information about all events generated by you in a specific duration. Let us look at the various features available on the Events screen.

DriverStars Tab

The DriverStars are awarded to you when you display exemplary driving behavior that has made the road safer. For example, you are awarded a DriverStar when you slow down after another vehicle moves into your lane. Here, you have created a safe distance between your vehicle and the vehicle in front and avoided a risky situation.

The associated video that is captured can be used as an example by your manager to demonstrate to other drivers on how to avoid unsafe driving situations.

Most Frequent DriverStars

Displays the Most Frequent DriverStars (top 3) for the specified duration for your driving events.

Shared DriverStars

These are the DriverStars shared with you by your Fleet manager for the specified duration.

Filters

You can narrow down your search results to get exactly what you want to search by using Filters.

Tap the Filters icon located next to Shared DriverStars. The various filter options can be seen in a list format. Check/uncheck the required category to filter and find the specific alert you want.

Video Availability

You can view or hide DriverStars based on the video availability.

- **Video Available:** The video has been received from the device and is available for viewing.
- **Video Requested:** The video is not available at present to be viewed and has been requested from the device. Once you raise the request the video is processed and made available for you to view.
- **Video On Request:** The video is not available and not yet requested. You can request it, if required.
- **Video Unavailable:** The video is no longer available and cannot be requested.

Show only

Select Show only, if you want to see only Bookmarked alerts or Not viewed alerts.

Sort By Date

You can sort the events list either in ascending (first to last) or descending (last to first) order for the selected duration.

Once you have selected the events you want to see in the DriverStars tab, tap Apply Filters.
